Course Description

This course presents the real number system as a complete, ordered field. It discusses topological properties of Euclidean n-space, limits and continuity, sequences of constants, and sequences of functions. It also covers differentiation and pertinent results such as the Mean Value Theorem.

Learning Outcomes On completion of this course, the student is expected to present the following learning outcomes in line with the Expected Lasallian Graduate Attributes (ELGA) and the outcomes prescribed by the CHED Memorandum Order for the BS Mathematics program. **ELGA** Program Outcome Learning Outcome Critical and Creative At the end of the course, the 3 8 9 4 5 Thinker student will show an understanding of the Effective properties that define the real Communicator number system demonstrate understanding of and Lifelong Learner ability to write proofs on basic topological concepts in the real number system Demonstrate understanding of and ability to write proofs on continuity, uniform continuity. convergence, and differentiation.

Program Outcomes (BS Mathematics) A graduate of the program should be able to

- 1. Apply analytical, critical and problem solving skills using the scientific method.
- Carry out basic mathematical and/or statistical computations and use appropriate technologies in the analysis of data, and in pattern recognition, generalization, abstraction, critical analysis, and problem solving.
- 3. Demonstrate broad and coherent knowledge and understanding in the core areas of mathematics
- 4. Gain mastery in the core areas of mathematics: algebra, analysis and geometry
- Demonstrate skills in pattern recognition, generalization, abstraction, critical analysis, problem-solving and rigorous argument.
- 6. Develop an enhanced perception of the vitality and importance of mathematics in the modern world, including the interrelationships within mathematics and its connection to other disciplines
- Appreciate the concept and role of proof and reasoning and demonstrate knowledge in reading and writing mathematical proofs.
- Make and evaluate mathematical conjectures and arguments and validate their own mathematical thinking
- 9. Communicate mathematical ideas orally and in writing using clear and precise language

Final Course Output As evidence of attaining the above learning outcomes, the student is required to submit the following during the indicated dates of the term. Learning Outcome Required Output Due Date Show an understanding of the properties that A written report based on regular Week 13 define the real number system. weekly group discussions with classmates on the topics covered in Demonstrate understanding of and ability to class. These discussions should write proofs on basic topological concepts in include how this course relates to the real number system

Demonstrate understanding of and ability to write proofs on continuity, uniform continuity, convergence, and differentiation. other areas of mathematics.

CRITERIA	Excellent (4)	Good (3)	Satisfactory (2)	Needs Improvement (1)
Understanding of Mathematical Concepts (60%)	Shows complete mastery of the concepts and processes studied in the course as well as their inter- relationships with one another	Shows an almost complete mastery of the concepts and processes studied in the course as well as their interrelationships with one another.	Shows a moderate degree of understanding of the concepts and processes studied in the course as well as their interrelationships with one another.	Shows a limited degree of understanding of the concepts and processes studied in the course as well as their interrelationships with one another.
Clarity of Presentation (30%)	The ideas presented are easily understood and the existing inter-relationships among the concepts and processes are clearly indicated.	Except for a few minor details, the ideas presented are easily under-stood and the existing inter-rela-tionships among the concepts and processes are clearly indicated.	Some ideas are not clearly presented and some inter-relationships are either lacking or not correctly presented,	Many of the ideas presented and inter-relationships among concepts and processes are incorrect or lacking.
Bibliography (10%)		All resources cited	Some of the resources not cited	Majority of the resources not cited

Additional Requirements •3 quizzes •Final Exam

	FOR EXEMPTED	FOR STUDENTS with		89-94%	4.0 3.5
	STUDENTS (w/out Final Exam)	with no missed quizzes	with one missed quiz	83-88% 78-82% 72-77% 66-71%	3.0 2.5 2.0 1.5
Average of quizzes	90% / 95%	60% / 65%	50% / 55%	60-65% <60%	1.0 0.0
Other requirements	10% / 5%	10% / 5%	10% / 5%		
Final exam		30 %	40%		

LEARNING OUTCOME	TOPIC	WEEK NO.	LEARNING ACTIVITIES	
Show an understanding of	Basic concepts of set theory	1	Recitation / Class	
the properties that define the real number system.be able	The Field axioms	2	discussion	
	The Order Axioms	3	Group discussions	
to clearly discuss what this	The Completeness Axiom	3-4		
course is about, both in itself	Quiz 1	4	Library work	
and relative to other courses taken.	The space R ⁿ and some properties	5		
Demonstrate understanding of and ability to write proofs on basic topological concepts in the real number system	The norm on R ⁿ and some topological properties	5-6	×	
Demonstrate understanding	Sequences in R ⁿ	6-7		
of and ability to write proofs	Sequences in R	7-8		
on continuity, uniform	Quiz 2	9		
continuity, convergence, and differentiation.	Limits of functions	9		
differentiation.	Continuous functions	10		
	Uniform continuity	11]	
	Quiz 3	11		
	Differentiation and differentiation formulas	12		
	Mean Value Theorems and L'Hopital's rule	13		
	FINAL EXAM	14		

The students will be instructed to form permanent groups of 3 – 5 students. These groups will have regular weekly meetings where the primary task is to discuss the material covered during the week. The results of their discussion will be documented since it will be their fourth hour activity. These written reports will be organized into a final report to be submitted at the end of the 13th week.

Class Policies

- 1. The required minimum number of quizzes for a 3-unit course is 3, and 4 for 4-unit course. No part of the final exam may be considered as one quiz.
- 2. Cancellation of the lowest quiz is not allowed even if the number of quizzes exceeds the required minimum number of quizzes.
- 3. As a general policy, no special or make-up tests for missed exams other than the final examination will be given. However, a faculty member may give special exams for
- A. approved absences (where the student concerned officially represented the University at some function or activity).
- B. absences due to serious illness which require hospitalization, death in the family and other reasons which the faculty member deems meritorious.
- 4. If a student missed two (2) examinations, then he/she will be required to take a make up for the second missed examination.

- 5. If the student has no valid reason for missing an exam (for example, the student was not prepared to take the exam) then the student receives 0% for the missed quiz.
- 6. Students who get at least 89% in every quiz are exempted from taking the final examination. Their final grade will be based on the average of their quizzes and other prefinal course requirements. The final grade of exempted students who opt to take the final examination will be based on the prescribed computation of final grades inclusive of a final examination. Students who missed and/or took any special/make-up quiz will not be eligible for exemption.
- 7. Learning outputs are required and not optional to pass the course.
- 8. Mobile phones and other forms of communication devices should be on silent mode or turned off during class.
- 9. Students are expected to be attentive and exhibit the behavior of a mature and responsible individual during class. They are also expected to come to class on time and prepared.
- 10. Sleeping, bringing in food and drinks, and wearing a cap and sunglasses in class are not allowed.
- 11. Students who wish to go to the washroom must politely ask permission and, if given such, they should be back in class within 5 minutes. Only one student at a time may be allowed to leave the classroom for this purpose.
- 12. Students who are absent from the class for more than 5 meetings will get a final grade of 0.0 in the course.
- 13. Only students who are officially enrolled in the course are allowed to attend the class meetings.
