College of Science

ITMATH3 –Introduction to Operations Research for IT students

Prerequisite: ITMATH1

Prerequisite: ITMATH1	Prerequisite to:
Instructor:Consultation Hours:	Contact details:Class Schedule and Room:

Course Description

Designed for Information Technology students, this is an introductory course in Operations Research. This course focuses on the basic models, the analysis and the solution of linear optimization models. The thrust is in the analysis of problems and their solution approaches. This course provides a firsthand exposure to a vast and highly relevant area of Operations Research.

Learning Outcomes				
On completion of this course, the student is expected to present the following learning outcomes in line with				
the Expected Lasallian Graduate At	ttributes (ELGA)			
ELGA	Learning Outcome			
Critical and Creative Thinker	Develop an understanding and appreciation of linear optimization			
Effective Communicator models as effective tools in addressing real world problems				
Lifelong Learner	especially those that are relevant to decision making in business,			
Service-Driven Citizen	economics and other related areas.			

Final Course Output

As evidence of attaining the above learning outcomes, the student is required to submit the following during the indicated dates of the term.

Learning Outcome	Required Output	Due Date
Develop an understanding and appreciation of	Case study on a business-related	Week 13
linear optimization models as effective tools in addressing real world problems especially	optimization problem	
those that are relevant to decision making in business, economics and other related areas.	Analytic Solutions Form of output: Written	

Rubric for assessment Written Group Report Needs **CRITERIA** Excellent (4) Good (3) Satisfactory (2) Improvement (1) Content and In-depth and Information Logical sequencing Logical sequencing Organization insightful of information of information most presented with little (50%) of the time. Details organization. Most of discussion in throughout. addition to score Sufficient are given but the details irrelevant. 3 performance supporting details. inadequate to Concluding Clear and effective support the topic. paragraph not clear concluding Clear concluding paragraph paragraph but lacks effectiveness No error Grammar Between one and More than four errors (30%) three errors **Bibliography** All resources cited Some of the Majority of the (15%)resources not cited resources not cited

Group Member Assessment

Criteria	Excellent/4	Good/3	Satisfactory/2	Needs Improvement/1
Contribution	Group member completed an equal share of work and strived to maintain that equity throughout the project	Group member contributed significantly, but other members clearly contributed more	Group member contributed little toward the project	Group members contributions were insignificant or nonexistent

Dependability	Group member provided contributions with 100% punctuality and always appeared for group work	Group member contributions were mostly punctual and almost always appeared for group work	Group member contributions were regularly late and often missed scheduled group work	Group member was undependable forcing other members to take up the slack
Efficiency	Work performed was very useful and contributed significantly to the final product	Participation was inefficient and thus contributions were less than expected	Work performed was inappropriate and mostly useless toward the final product	Work performed was completely ineffective and useless in the final product
Attitude	Group member was very positive and pleasant to work with	Group member didn't complain but offered little enthusiasm	Group member sometimes complained and was somewhat of a burden	Group member often complained and generally demoralized the group

Additional Requirements

Aside from the learning output, the student will be assessed at other times during the term by the following:

• Skills Check (Seatwork/Quizzes/Boardwork)

- Individual/Group Report
- Individual/Group Problem Set

	FOR EXEMPTED		UDENTS	Scale: 95-100% 89-94% 83-88%	4.0 3.5
Average of quizzes & Project	STUDENTS (w/out Final Exam)	with no missed quiz 60%	With one missed quiz 50%	78-82% 72-77% 66-71% 60-65% <60%	3.0 2.5 2.0 1.5 1.0 0.0
Class participation & Lab exercises	10%	10%	10%		
Final exam	-	30%	40%		

Learning Plan			
Learning Outcome	Culminating Topics	Week No.	Learning Activities
Develop an understanding and appreciation of linear optimization models as effective tools in addressing real world problems especially those that are relevant to decision making in business, economics and	1. LINEAR PROGRAMMING: FORMULATION AND GRAPHICAL SOLUTION 1.1 Formulation of Two-variable LP models 1.2 Graphical Solution 1.3 Sensitivity Analysis 1.3.1 Changes in the objective coefficients 1.3.2 Changes in resources 1.3.3 Unit worth of a resource	Week 1 – 3	Group discussion and presentations Skills exercises Student self-assessment and Reflection Seatwork and Assignments Solution of Systems of Linear Inequalities (limited to basic application of concepts) Analysis through GRAPHMATICA
other related areas.	2. SIMPLEX METHOD 2.1 Standard form of an LP model 2.2Simplex Method and Basic Solutions 2.3 Finding Initial Basic Feasible Solutions 2.3.1 Big-M Method	Week 4 – 7	Group discussion and presentations Skills exercises Student self-assessment and Reflection Seatwork and Assignments

		т
2.3.2 Two-Phase Method		Row Operations on
2.4 Special Cases		Matrices (limited to basic
2.4.1 Alternative Solution		application of concepts)
2.4.2 Unbounded		Using MS Excel to Perform
2.4.3 Infeasible		Row Operations
2.4.4 Degenerate		·
2.5 Interpreting and Completing the		
Simplex Tableau		
3. DUALITY AND SENSITIVITY	Week	Group discussion and
ANALYSIS	8-12	presentations
3.1 The Dual Problem	0 12	Skills exercises
3.2 Primal-Dual Relationships		Student self-assessment
3.2.1 Simplex Tableau Layout		and
3.2.2 Optimal Dual Solution		Reflection
3.2.3 Economic Interpretation of		Seatwork and Assignments
the Dual Problem		Row Operations on
3.3 Dual Simplex Method		Matrices (limited to basic
3.4 Sensitivity Analysis		application of concepts)
3.4.1 Changes in Resources		Using MS Excel to Perform
3.4.2 Changes in Objective		Row Operations
Coefficients		Using Excel Solver to
		Assess Solutions
4. THE TRANSPORTATION PROBLEM	Week	Group discussion and
4.1 Transporatation Model and	13	presentations
Tableau		Skills exercises
4.2 Transportation Algorithm		Student self-assessment
4.2.1 Starting Solutions:		and
Northwest Corner Method,		Reflection
Least Cost Method		Seatwork and Assignments
4.2.2 Iterative Computations and		Using MS Excel to facilitate
Optimal Solution		computation
4.3 Assignment Problem		
FINAL EXAMINATION	Week	
FINAL EXAMINATION	vveek 14	
	14

Class Policies

- 1. The required minimum number of quizzes for a 3-unit course is 3, and 4 for 4-unit course. No part of the final exam may be considered as one quiz.
- 2. Cancellation of the lowest quiz is not allowed even if the number of quizzes exceeds the required minimum number of guizzes.
- 3. As a general policy, no special or make-up tests for missed exams other than the final examination will be given. However, a faculty member may give special exams for
 - A. approved absences (where the student concerned officially represented the University at some function or activity).
 - B. absences due to serious illness which require hospitalization, death in the family and other reasons which the faculty member deems meritorious.
- 4. If a student missed two (2) examinations, then he/she will be required to take a make up for the second missed examination.
- 5. If the student has no valid reason for missing an exam (for example, the student was not prepared to take the exam) then the student receives 0% for the missed quiz.
- 6. Students who get at least 89% in every quiz are exempted from taking the final examination. Their final grade will be based on the average of their quizzes and other prefinal course requirements. The final grade of exempted students who opt to take the final examination will be based on the prescribed computation of final grades inclusive of a final examination. Students who missed and/or took any special/make-up quiz will not be eligible for exemption.
- 7. Learning outputs are required and not optional to pass the course.
- 8. Mobile phones and other forms of communication devices should be on silent mode or turned off during class.
- 9. Students are expected to be attentive and exhibit the behavior of a mature and responsible individual during class. They are also expected to come to class on time and prepared.
- 10. Sleeping, bringing in food and drinks, and wearing a cap and sunglasses in class are not allowed.
- 11. Students who wish to go to the washroom must politely ask permission and, if given such, they should be back in class within 5 minutes. Only one student at a time may be allowed to leave the classroom for this purpose.
- 12. Students who are absent from the class for more than 5 meetings will get a final grade of 0.0 in the course.
- 13. Only students who are officially enrolled in the course are allowed to attend the class meetings.
