and Placida R. Gantuangco

Can-asujan National High School

Can-asujan, Carcar City, Cebu

placida.gantuangco@deped.gov.ph

Abstract: This study examined the teaching capabilities, teaching experiences, and the different challenges among senior high school teachers. The research focused on four Senior High School Teachers of Can-asujan National High School for the first semester of the school year 2017 – 2018 in relation to their teaching experiences and the challenges faced in teaching different subjects. The school is located one kilometer southeast away from the city proper and is one of the eight public schools of Carcar City Division offering senior high schools specifically techno-vocational livelihood track. The study used a phenomenological qualitative research design. Collection of data is through a one – on – one interview which was recorded, after which, analyzed, interpreted, and summarized. Analyses were based on clustering the results to create themes. From the interview, the respondents revealed the reasons behind the stress were disruptive behavior, overlapping activities, student diversity, limited sources and support, poor student motivation and accountability policies; the challenges encountered were lack of equipment, handling learners close to the teacher's age and the behavior of the learners; and the system used by the Department of Education were all competencies should be taught despite many activities aside from many other paper works. Thus, the researchers recommended that the department should address the lack of equipment for the learner's skills enhancement; teachers should undergo trainings / seminars on how to handle Senior High school learners. This will be presented to the Senior Program Specialists to be aware of the results and the output which serve as the policy in hiring Senior High School Teachers.

Key Words: Senior High School Teachers; Lived Experiences; Teacher Stress; One-on-One Interview; Phenomenological Study.

1. INTRODUCTION

1.1 Relevant Developments

The controversial issues on educational system brought the idea of revising the curriculum to extend a more way of developing the teaching process. The concept of having grade 11 and grade 12 was among the ideas that came up. Having the new curriculum is a collaborative input which was reviewed and developed for further improvement of the educational system in the country. K to 12 has targeted the roads of the learners to achieve one's dream in preparing ambitions in life. Opportunities may vary due to financial assistance and supports but with the K to 12 programs, it broadens the learners' information and experiences that one has to contain with.

Presented at the 12th DLSU Arts Congress
De La Salle University, Manila, Philippines
February 20, 21 and 22, 2019

A new level of basic education consisting of grade 11 and grade 12 known as the senior high school was launched on June 2016 as prescribed in the Enhanced Basic Education Act of 2013 (the Act). Education worldwide must undergo twelve years in basic education from K to 12. Philippines adopted the new curriculum to compete not just academic but also on skills. Studying Senior High School is the stepping stone to pursue one's dream in life whether the learner will go to college or work directly right after graduation. Two years' time is enough for the learner to think on where should he or she will be in the future.

Teaching senior high school needs specialization and mastery. Compared to other Asian countries, the Philippines is the only country in Asia which does not adopt senior high school. That is the reason why the Department of Education decided to implement Senior High School in the curriculum.

With this new curriculum, it leads to every school a tug-of-war situation since not all young learners with parents or guardians are in favor with the situation. The reason is to get job in their earlier years. Campaigning in giving importance to K to 12 program is another issue to be faced by the educational institution.

According to M. A. Lin Goodwin, et al. (2017), teachers must have more knowledge and deeper command on complex skills. Teachers must be specialized in a certain subject. In a technological vocational course, he or she must undergo internships and trainings. For the Department of Education, the success of any educational system relies on the competence of its teachers. The Civil Service Doctrine of the Constitution thrust to enhance the quality of basic education. The department hired qualified Senior High School teachers teaching young learners. Based on the Department Order number 49, series of 2016 - Guidelines on the Hiring of Contractual (Full-time and Part-time) Teachers in Senior High School is of great help to some educator for them to apply a teaching position for the Senior High curriculum. Teacher must be fully equipped for the level of learning since these learners are different compared to the first four years of high school life.

Acosta (2016) said that the Enhanced Basic Education Program of Department of Education does not only call for academic excellence but also on higher teacher qualification. Teacher licensure examination is essential in the basic education reform in the Philippine Education system. Passing the Licensure Examination for Teachers is an important requirement upon teaching inside the classroom. It is the hiring standard recognized by the public schools as an assurance of competence and quality.

Carcar City Division followed the standard hiring requirement of the Philippine Education System. Since senior high school curriculum is new to all public secondary schools and even to the private schools, huge and quick admission of teachers were made by the human resource department. There were schools offered courses in which there is no suitable teacher to teach that particular course. What the school head did was, picking teachers from junior high school to teach.

From that view, there are still schools in which teachers handling senior high school were not specialized in a certain teaching load. This reason comes up to the researchers to conduct the study to look on the ways to break the gap.

1.2 Objectives

The survey on Senior High School Teachers in Can-asujan National High School, Carcar City Division for the first semester of the school year 2017 - 2018 with regards to their teaching capabilities. Specifically, this study answered the following queries:

1. What were the teaching experiences of Senior High School teachers?
2. What were the challenges faced in teaching different subjects in Senior High School?
3. Based on the findings of the study, what education programs be implemented?

1.3 Respondents

The respondents of the study were the four senior high school teachers of Can-asujan National High School, teaching Shielded Metal Arc Welding, Dressmaking, and Hairdressing subjects, and academic subjects.

Presented at the 12th DLSU Arts Congress
De La Salle University, Manila, Philippines
February 20, 21 and 22, 2019

1.4 Research Locale

This study was conducted in Can-asujan National High School, Carcar City which offered Shielded Metal Arc Welding, Dressmaking, and Hairdressing. The school is located one kilometer southeast away from the city proper and is one of the eight public schools of Carcar City Division offering senior high schools specifically techno-vocational livelihood track. The next municipality of which bound north is San Fernando, Cebu, bound south is Sibonga, Cebu, and bound southeast is Barili, Cebu.

2. METHODOLOGY

2.1 Research Design

This study used a phenomenological qualitative research design. It described the teaching experiences of Senior High School teachers in Can-asujan National High School, Carcar City Division, first semester of the school year 2017 - 2018. The researchers aimed to gather in-depths understanding of the mentioned problem and wished to describe the challenges faced by the senior high school teachers in teaching core, applied, and specialized subjects.

2.2 Data Collection

Since this study is a one – on – one interview, interview-guide questions was fielded to the respondents. After the potential participants had been identified, an interview will be scheduled at a time and place convenient to the participants. The researchers gave one to two hours for them to answer the interview-guide questions. Oral process consent was solicited throughout the interview process. Process consent is an oral negotiation and renegotiation during the interview as unexpected situations or consequences occur. It reflects sensitivity to the dynamics of phenomenological research and to the participants' human rights in the telling of their story.

The length of the interviews was not constrained and lasted about one hour or two. All interviews were recorded and transcribed verbatim. Participants were assured of confidentiality with their answers.

During data analysis, the researchers employed reflective journaling to record aspects of the interview and personal reflections. The journaling process added to the credibility and honesty of the research and delivered a review path of ethical and methodological decision-making. The researchers clustered the results to create themes.

2.3 Ethical Issues on Confidentiality

The researchers kept the confidentiality of the respondents of not stating their names.

3. RESULTS AND DISCUSSIONS

There were different responses on the way the Senior High School teachers of Can-asujan National High School reacted on their teaching professions.

Respondent A is a TLE graduate with TM. She is 23 years old and has two years in private and one year in public teaching experience. In private school, she was teaching English, MAPEH, AP, FILIPINO, and TLE. In Can-asujan National High School, she was teaching Media and Information Literacy and in her specialization (Dressmaking).

Respondent B is a TLE graduate with TM. He is 28 years old and has one year in private and one year in public teaching experience. He was teaching TLE in private school. In Can-asujan National High School, he is teaching in his specialization (Shielded Metal Arc Welding).

Respondent C is a TLE graduate. She is 23 years old and has a year of teaching experience in public school. In Can-asujan National High School, she was teaching Dressmaking, Hairdressing, Personality Development and Filipino sa Piling Larang.

Respondent D is a TLE graduate with TM. She is 25 years old with no teaching experience. She was teaching Physical Science and Physical Education.

From the interviews being conducted, the researchers formed themes based on the investigations being utilized using the phenomenological methodology. The three themes revealed as: **a. reasons behind the stress; b. challenges encountered; and c. using the system of Department of Education.**

3.1 Reasons Behind the Stress

From Meriam Webster, stress defined as “a state of rational pressure and worry caused by problems in life, work, that causes resilient feelings of uneasiness or anxiety”. According to Skaalvik (2016), it is referred to as disagreeable sensation experienced causing from aspects of the work as a teacher. Some studies recognized probable stressors such as including student misbehavior or discipline problems, time pressure and workload, poor student motivation, multiplicity of students, misunderstanding with associates and coworkers, lack of administrative support, and value conflicts. Several of these stressors were also found in semi-structured interview studies by Shernoff, Mehta, Atkins et al. (2011) and Skaalvik&Skaalvik (2015). They found out that the main sources of stress were disturbing student attitude, too much workload, student multiplicity, incomplete resources and support, school-level incompetence, accountability policies, working to adapt teaching to students’ needs, lack of self-rule, lack of shared goals and values, problems and conflicts related to coordination, and lack of prestige. The studies also reported that teachers at different ages experienced very similar stressors at school, but the senior teachers desired increasingly more time to get better from stress (Skaalvik, 2016).

The following were the answers of the respondents with regards to their teaching experiences:

Respondent A

“My first two years as a teacher, kay akong nafeel kay excitement, kay first time man ko mo teach, but in thesecond year na pod sa period, kay mura ko ug gikapoy...gikapoy due to...gikapoy ra ko... wala ko kabalo sa rason adtung panahuna. Gikapoy..or giboringan ko atung panahona, that's why I decided to go to public teaching, and then, pagsugod sad nako sa public excited sad ko, pag-kahibaw ko nga ang Senior High or K-12 akong sudlan is dili ready, pero positive ko ug thinking na kaya rani, ok

ra guro ni, pero pagsud ko sa public, ingon ani diay ang scenario, kuwang kayog mga gamit and so on, kuan ra siya, exciting na challenging noon... hangtod karon, challenging gihapon".

(My first two years as a teacher, I felt excited. But in the second year, I felt tired. I did not know why, maybe it was boring. That's why I decided to go to public teaching. I felt excited in handling Senior High School though the department is not ready. In my mind, I was positively thinking that I could manage. When I was there, the scenario was, lack of equipment and others. From being excited it was turned into challenging until now).

Respondent B

"A little bit challenging because I encounter lots of problems, especially in equipment and my specialization, so, kinahanglanjodko mangita ug way nga unsay dapat buhatonnga ma catch-up jod ang competency".

(A little bit challenging because I encounter lot of problems, especially in equipment and my specialization, so, I need to find ways on what to do to catch-up the competency).

Respondent C

"As a teacher stressed, stressed samga buhatonsa like forms, making lesson plans".

(As a teacher, stressed in making lesson plans and other forms).

Respondent D

"My teaching experience was fine and good in my 2 months of teaching in Senior High School, handling Physical Science in Grade 12 and Physical Education in Grade 11. My happy moments in teaching are most likely the relationship between me and my students. There is synchronization and participation of the students during my class and the good relationship of all my colleague makes me happy."

In Can-asujan National High School, the main sources of stress were the disruptive student behavior, overlapping activities, student diversity, limited resources and support, poor student motivation and accountability policies.

Disruptive student behavior in the sense that there was a diversity on the students. The classroom setting was heterogeneous. As stated by Rose & Gallup (2005) cited in Oliver, et al (2011), that disruptive behavior in school has been alarming for many years, and the school demanded for support from teachers related to behavior and classroom management. These students have low academic performance.

Overlapping activities were having two or more activities in a month. But, according to Floro & Miles (2001), it is an important feature of time use that has previously accredited little attention in cost-effective study. Past studies have looked only at main activities, pay no attention to the circumstance that individuals often perform two or more activities simultaneously. The exploration of that activities is valuing the time use, that is now acknowledging attention in economic, social and policy analyses.

Limited resources and support means lack of equipment and books like learner's manual. The learners cannot finish the required competency on time due to lack of equipment. They have to wait for their classmates who did the task first.

Accountability means teachers were accountable of not having lesson plans and of not accomplishing some forms. Since teachers are required to comply lesson plans and to submit other school forms.

3.2 Challenges Encountered

The following were the respondents revelation on the challenges encountered:

Respondent A

"Equipment, then pag handle sa bata, nga kanang mature, mature ug edad pero ang uban dili' mature ug paghunahuna, kay na learn kog teach sa mga bata nga grade 6, mga elementary, karun kay lahi napud, akong approach anin gmgma edara, mao sad na usa sa akong mga challenges, duol raba mi ug gap, mura ra koug ate nila, parehas ra mi ug nawong, bata pa".

(Equipment and handling the learners. Some were matured enough and other are not. I learned to teach elementary students and now is different. My approach with these ages is different since we are too close. I am like their elder sister).

Respondent B

"Yes, specifically kana atung equipment sir, ahmmmm para ma acquire ang skill sa bata sa atong SMAW kay without kanang mga equipment lisod kay pagkuha sa ilang competency which is ang skill jud nga mu hands on dapat ang bata, specially mu-take na sila ug NC II, without kanang mga pipes, equipment, especially kanang transformer, which is ang area is low voltage then mao gyo dakong naproblemahan karon kay unsaon pagpangitag paagi, nga ang bata is maka hands on individually, kay usa ra ka welding then dili nato ma assure nga ang skills, kinahanglag range nga dakudako, nindot unta nga angbata one is to one welding machine, so, mao gyod na, akong gipangita ug paagi. Sa lain pud nga na encounter, pipe wala taypipe, sa atong welding machine so akong gibuhat is plate lang all position ang akong gipabuhatsa ilaha, ing ana akong paagi so mao na akong na encounter".

(Yes, especially with our equipment. If there is no equipment, how could the learner acquire the national certificate? Our area has low voltage and it needs transformer. It is very nice if the ratio is 1:1 on student welding machine. We have no pipe. What I did with them was, using the plate then have weld all position).

Respondent C

"Yes, behavior sa mga students".

Presented at the 12th DLSU Arts Congress
De La Salle University, Manila, Philippines
February 20, 21 and 22, 2019

(Yes, the behavior of the students).

Respondent D

"Yes, the challenge I have encountered in my current teaching is that I'm handling the subjects which are not my field. Yet teaching while learning is very much better."

The challenges they encountered were the lack of equipment, handling the learners with too close with respect to the age gap, and the behavior of the learners. Equipment is really needed for the Senior High School Students especially on Techno-Vocational Track. These learners are more on hands-on or application. Handling students with close to the age of the teacher is really hard especially the teacher is newly hired. The behavior of the learners specifically the 21st century learners are not easy to handle. It needs more patience and understanding.

Car-asuhan National High School encountered lack of equipment especially on their specialized subjects. To cope up with all the competencies on the specialized subjects, the SMAW teacher-respondent looked ways like presenting the plates with all kinds of position.

3.3. Using the System of Department of Education

The following were the answers of the respondents in using the system of Department of Education.

Respondent A

"Nagtoo ko na sa system sa Senior High is very different from the system in Junior High, kay actually dapat jod siya ilain ug approach, kay pang college ma ni sila nga level nya, semester sad bah,lain kay ba, kay ang approach sa Junior parehas ra, maglisod man ta aninilag papugos himog project, papugos ug unsa dapatang ilang approach or system sa Senior High kay lahi, pareha pag college, nga ang teacher maoy dili mag sige Ug sunod, sila maoy mag sigeg pangita ug paagi kay karun ang teacher kay,pagbuhat namo, ana,ana.ana.dapat approach sa college nga system sir, dili parehas sa Junior nga approach....though ang mga bata kay, you can't please everyone, nay ganahan nimu, nay dili ganahan, pero in the end, ang biggest accomplishment sa teacher or achievement kay kuan ang bata mausab...huhuhu..."

(I thought the system of Senior High School is different in Junior High School. Actually, it should be, because it is like College. We can't force them to make projects. The learners should do their part, not the teacher making any move to let them do. But, we can't please anyone, some like you and some won't. But in the end, the biggest accomplishment or achievement of a teacher is when the child change).

Respondent B

"Medyo daghan sa atong kuan man is, dagdag activities, so lisod pag cope up sa skills sa mga bata, ma cut cut nila ang oras so, I'm still adjusting the time or sa system sa atoang kuan. Based on my experience so, during sa atong time or time sa bata karon, kinahanglan gyod ma-specialized jod tarong ang skills, mohands on silang tanan, so that inig abot sa field dili sila ma ignorante about sa ilang skills. But onsaon man nila pag one-on-one hands-on if limited ra ato ang mga gamit? Di mi kapalit sa ubang mga materials kay di kaya sa among MOOE. Ubang schools abunda kay dako ilang Fund. Ang amoakay gamay ra tungod kay ni base ang DepEd sa Number of Enrollees dili sa course or track".

(The system has many activities. It is not easy to cope up the skills of the learners. But I am still adjusting on the system. Based on my experienced and during our time or even this time, learners should know the skills and all should do the hands-on to enhance the skills. How could they perform one-on-one if the materials are just limited? We cannot buy some materials needed because our MOOE fund is small. Some schools have higher MOOE funding compared to ours because the funding is based on the number of enrollees and not on the course or track).

Respondent C

"Usara sir, para ang system and services para ang mga students kay maka learn para sa ilahang future".

(Only one sir, for the system and services for the students to learn for their future).

Respondent D

"I addressed those challenges to the higher authority. But in the sense that teachers are flexible, whatever it is, one must find ways in delivering the lesson the best to let the students understand the most. Being a teacher, I should have to use those challenges as my inspiration which may help me molded in my field of teaching. But if I cannot handle anymore, why not approach my superior or the higher authority, right? I believe that thing will be done in a good and nice way of approaching. I have nothing to recommend to the higher authority when I know that I can still handle those challenges. I just do my teaching profession the best that I can without hesitation nor complaining."

Time is one of life's most valued possessions, as it is something you can never get back. One of the most essential life skills to master is time management. Mastering time management is more than just increase productivity. It can also produce significant health benefits. If manage wisely, it lessens the stress and improves the quality of your life completely.

Today we have Junior High School and Senior High School. The approach on the Junior High School is the same as the approach on the Senior High School. One of the respondents said that the two must be different, the Senior High School must be in modular approach.

The Department of Education also has many activities, some were overlapping. One of the respondents said that it really hard to cope up all the competencies because of the overlapping activities.

Presented at the 12th DLSU Arts Congress
De La Salle University, Manila, Philippines
February 20, 21 and 22, 2019

4. CONCLUSION

The study investigated the lived experiences of Senior High School Teachers of Can-asujan National High School with regards to stress, challenges encountered, and using the system of Department of Education.

The reasons of stress felt by the teachers were disruptive student behavior, overlapping activities, student diversity, limited resources and support, and accountability policies.

The teachers encountered challenges in the application on the skills on their specialized subjects due to lack of equipment, tools, and learning materials.

Modular approach was the ideal way of teaching as revealed by the respondents. They believed that in teaching Senior High School, skills development and behavioral development are very important.

The result revealed that Senior High School Teachers experience stress and challenges with their new teaching responsibility. Their challenges included the lack of equipment for the skill enhancement and the behavioral maturity of the Senior High learners.

Based on the findings and conclusions of the study, the researchers recommend that the department should address the lack of equipment for the TVL track for the learner's skills enhancement. It also recommends that they should undergo trainings / seminars on how to handle Senior High school learners and teaching pedagogies.

The development plan drafted in this study be implemented to promote higher learning skills of students in Senior High Schools and served as the policy in hiring Senior High School Teachers.

4.1 Proposed Development Plan

Rationale

Looking forward for the learners' improvement is what the goal of being educators as catalysts of change. As teachers, we should be directed for the betterment of the learners. There are many things being imparted to them. It is in the foundation of their skills that may discover, develop, and enhance by the teachers. Now, we are in the world of rapid change. Teachers should not be left behind especially in educating the millennial, for they easily adopt the rapid change in the world.

We noticed from most developing countries, placed more emphasis on the importance of the educational system in leading technological innovation that result in productivity. Advancement in technology is dependent on having well trained students and on how well a particular teacher trains its students. In order to have well trained students that can think and invent new things, there has to be good policies in each school that creates a good conducive environment for learning, like having equipment and materials for the students to use during hands-on.

Objective

This plan is being implemented and is purposely designed with the findings of the study as the basis in catering all schools of concern. The rationale behind this study is premised on lack of equipment, and managing the time and the stress.

The findings of this study will bring to the general awareness of the factors that affect students' skills on handling the tools and equipment. Other schools that cater Senior High School and even Junior High School are also beneficiaries of this study that will help them to design strategies to increase on how to mold students to be innovative.

Scheme of Implementation

The plan includes the specific objective, strategies, persons involved, time frame, and the expected outcome that address to specific area of concern. The teachers could use this plan as the basis for the development of the learners.

Proposed Development Plan

Areas of Concerns	Objectives	Strategies	Persons Involved	Time Frame	Expected Outcome
Educational Attainment	Teachers' professional growth	Encourage to continue post graduate studies	Teachers, school head	3 – 6 years	Master teachers
Teaching Experience	Have sufficient techniques in understanding learners	Requires to attend trainings/ workshop and seminars	Teachers, school head	1 week for every training/ workshop	Understanding and flexible teachers
Relevant training/ seminars	Have knowledge with their specialization	Requires to attend training/seminar related to their field	Teachers, school head	1 week for every training/ workshop	More knowledgeable on Specialized field
Teaching Strategies	Upgrade on 21 st century teaching strategies	Require to attend training/seminar	Teachers, school head	1 week for every training/ workshop	Equipped with latest teaching strategies
Teaching Competencies	To attain completely the required competencies	Exemption of Senior High School from other school activities	Teachers, School Head, Students, DepEd person-in-Charge	School Days	Students are completely competent
Hands-on skills	Learners must quick on the application of their specialization	Must have equipment to practice/use or apply	Teacher, students, school head, Stakeholder, DepEd person-in-charge	School days	Students globally competent

5. ACKNOWLEDGEMENT

The researchers wish to express their profound gratitude to the following persons who have extended their unselfish support in the realization of the study.

BERF, Region VII, for giving the financial support to make this a reality.

Dr. Gregorio Cyrus R. Elejorde, the Superintendent of Carcar City Division, for his encouragement to finish the research.

Presented at the 12th DLSU Arts Congress
De La Salle University, Manila, Philippines
February 20, 21 and 22, 2019

Dr. Archie M. Torcende, the Senior Education Program Specialist – Planning and Research, for his intellectual guidance and thorough review of the manuscript.

The respondents of the study, in giving their unselfish time in answering the interview.
