Job vacancies: 5

Job description:

The data engineer will work on various projects alongside our researchers to collect, build and refine datasets for the research work they perform. His key responsibility is to process, cleanse and verify the integrity of data used for analysis; optimise data for consumption.

Responsibilities:

- Coordinate with model researchers to develop data jobs
- Design workflow/framework to facilitate exploring large scale data
- Monitor and maintain daily data production

Qualifications:

- Patient, detail-oriented and highly responsible;
- Willing to learn complicated topics, solve difficult problems, and handle tedious tasks carefully;
- Strong programming skills in C/C++/Python;
- Comfortable with Linux;
- Strong problem solving skills;

The following skills are bonus:

- Knowledge on database
- Web development experience
- Experience with large data (>100G)
- Foreign languages such as French, German, Japanese and Korean.
