PROFESSIONAL EXPERIENCE

2015 - 2016	INTERNATIONAL MONETARY FUND Intern, under Resident Representative Office Study Prepared: Small Open-economy DSGE Model with Financial Accelerator, Banking Sector, Excess Liquidity and External Borrowing of Agents.
2009 - 2010	C&E PUBLISHING, INC. Research Specialist, under Corporate Planning and Development Office Report Prepared: DOLCELATTE Market Study.

RESEARCH INTERESTS

Complexity Economics	Complexity Economics looks at the economy as a complex adaptive system, wherein heterogeneous agents interact with each other. These micro-level interactions among diverse economic agents therein lead to self-organizing and emergent macro-level behavior of the system.
Agent-Based Economics	Agent-Based or Artificial Economics uses agent-based computational models to simulate economic systems, wherein inherent complexity of the system is studied and given consideration.
Buddhist Economics	Buddhist Economics introduces spiritual and Buddhist philosophical doctrines to the study of economics. It provides a humanistic approach to the analysis of the economy and concerns itself with environmental and sustainability of resources when analyzing consumption and production issues.
